

PRODUCT:

SUR-FACE CONCRETE RETARDER

CHEMICAL HOUSE**DESCRIPTION:****SUR-FACE CONCRETE RETARDER**

- **SUR-FACE** – standard viscosity for horizontal work, e.g. precast panels, construction joints key or kicker joints etc.
- For all grades of **SUR-FACE** the depth of retardation depends upon variables like
 - The thickness of the coating,
 - The time elapsed before the retarder is removed,
 - The cement content and the quantity of water in the mix.
 - The ambient temperature
- **All SUR-FACE variants are** non-toxic and biodegradable and comply with GREEN STAR-OFFICE DESIGN V3 IEQ-13.

DIRECTIONS FOR USE:

For all horizontal applications using **SUR-FACE** or **SUR-FACE PLUS**.

Wait until all finishing procedures are completed just after the concrete loses its sheen, before the initial set.

Do not rework the concrete after **SUR-FACE** has been applied or an uneven finish will result.

Apply **SUR-FACE** with a low-pressure spray on to the surface to be revealed.

To achieve a normal exposure on aggregate up to 20mm use undiluted at a rate of 1litre to 4m².

For aggregate between 6-10mm dilute **SUR-FACE** 1:1 with water according to the exposure required.

Remove surface mortar within about 2-12 hours after the initial set of the concrete. Time will vary depending on weather conditions. Use a stiff broom to loosen the mortar and remove with a low-pressure hose sprayer.

- Will result in an exposed aggregate type finish.
- Diluting reduces the effectiveness of Sur-face. Trials should occur before application.
- Treated surfaces should be protected from direct sunlight and warm wind which can cause the surface to dry out rapidly.
- Overdosing will lead to deeper than required exposures causing aggregates to dislodge.

Curing if specified of **SUR-FACE** slabs can only be effectively achieved with conventional wet cure methods, as membrane cures will interfere with the revealing process.

For vertical and ceiling applications use **SUR-FACE TK**.

For extended open times use **SURFACE PLUS**.

APPLICATION RATE:

4 m²/L for surfaces.

SPECIAL NOTE:

Pre-testing of all admixtures should be undertaken, prior to commercial use as mix conditions change from location to location. Chemical House will not accept responsibility for any damages through inadequate pre-testing.
